## **CPS America Wins 4 of Solar Power World's Top Products Awards for 2023**

### **(5MWh ESS, FlexOM Gateway v2, 350kW inverter, and 800Vac Breaker Box)**

CPS America is excited to announce that it has been named in Solar Power World's Top Products for 2023! Through constant innovation, hard work, and collaboration; CPS America is proud to announce that the following products have been named as award winning by Solar Power World: FlexOM Gateway v2 (2<sup>nd</sup> year in a row), 5MWh Battery Energy Storage Container, 350kW 1500Vdc String Inverter, and the 800Vac Breaker Box Solution for CPS 250/275kW Inverters.

Zhehan Yi, Utility and ESS Director stated "It is an incredible honor that our ESS market segment products are already being recognized for their advanced innovative features. Not only is the 5MWh ESS container a high-energy density solution for Utility Scale projects, but the unique string structure with our 2.4MW PCS skid will help improve the up-time and reduce O&M efforts significantly." Zhehan's focus with CPS America has been developing product solutions for the ESS market segment and integrating these advancements onto Utility Scale projects. "I'm most excited to continue to provide our customers with the most innovative solutions as the landscape of solar in the US shifts towards the need for optimized energy storage" Zhehan added.

One of the core objectives of CPS America has been to continue to be the leader for innovation across the industry. As CPS has expanded its product offerings, Jordan Harrison the Product Strategy lead has helped drive this innovation across all product offerings. "The role of Product Strategy is a new one for me, but having solutions for all solar challenges is an important task to accomplish. I am excited to continue to expand, elevate, and advance solar technology solutions over the next few years, and push the boundaries of what CPS can do to become the Total Solutions Provider for all solar applications."

CPS America started off as a company focused specifically on C&I projects and offered 3 phase string inverter solutions. "The growth over the past few years has been quite impressive" said Anton Patton, CPS Senior Product Management and Applications Engineering Director. "We started off as a group solely focused around carport, rooftop, and ground mount applications on C&I projects. Now and looking into the future, it's great to see how CPS has maintained the #1 market share in C&I, as well as expanded not only into Utility Scale projects, but also increasing its product offerings across the board."

"CPS America has been driving the industry forward to grow solar faster. From expanding product offerings to get sites installed quicker, to creating more construction jobs and career opportunities, CPS America is in the business of serving and supporting America," stated Bryan Wagner, President/GM of CPS America. "CPS America being named as a part of Solar Power World's Top Products is a testament to our dedication to innovate solar solutions. We analyzed market research for the past couple of years to determine the gaps that the industry faces and figured out how we can address the challenges that are slowing down solar." Bryan is excited to see CPS repeat back to back years with 4 products being named to Top Solar Products. The Flex (service platform) was named in back to back years, and CPS has received a total of 7 product awards in the last 2 years! "This was a full team effort and we've known for many years we have the best Products, Engineering, and R+D teams in the industry, but these awards showcase our belief!"
